

## How to work out your club's floor area

If you don't have information on the total floor area of your club, you can work it out using a few simple steps.

1. **Work out the sizes of each room.** Measure the length and width of each room in the club in meters.
2. **Calculate the floor area of each room in the club.** Multiply them together to give you a floor area in square meters (m<sup>2</sup>). If your club has more than one floor, don't forget to repeat this process for all floors.
3. **Add together the floor areas of all the rooms.** This will give you a total floor area for the club.

Enter your total floor area figure into the energy calculator.
